

Parts for Order Picker Forklift

Order Picker Forklift Parts - Order preparation operation or order picking as it is more commonly known is a process used within warehouse operations and comprises workers referred to as order pickers. The order picker's job is to collect and take articles in certain quantities to fulfill the client's orders prior to shipment. Order picking is a simple warehousing method. The effectiveness in which this particular task is accomplished could be directly connected to a supply chain's productivity. Thus, order picking is one of the most controlled logistic methods. Order picking falls in the category of the warehouse management system.

There are specific kinds of order picking which consist of: wave picking method, pick to box method, piece picking or picker to part method, sorting systems method and zone picking method.

The pick to box method comprises the order picker filling the box with the things from her or his station. The box then moves to other picking stations until the customer order is finish. In this particular method, there is no movement of the order picker personnel. In the wave picking method, the order pickers move around to be able to gather the needed items for several orders. The picker to part method or piece picking is similar where the order picker or pickers move in order to gather the items required but for one order only.

There is no movement by the order picker in the sorting systems method. Rather, things are delivered to the orderpicker by an automatic system like an automatic storage system or a conveyor system. In the zone picking method, each and every order picker is assigned to one particular area. They are responsible for only realizing order picking in this particular zone.
