

JLG Forklift Parts

JLG Forklift Part - Following retirement in the late 1960's, John L. Grove set out on a cross country RV expedition. After spending many years establishing his family built crane company with his brother, John had no idea that this trip would bring about the rise of JLG Industries, Inc. The world leader of mobile aerial work platforms and precision material handling technologies was the end consequence of a road expedition.

All through their journey, John reacquainted himself with past business connections along the way. In combination with these conversations and a significant event; two workers had been unfortunately electrocuted on scaffolding when the Groves were passing through the Hoover Dam. John uncovered an infinite marketplace for a product that could quickly and safely lift people in the air to accomplish upkeep and other construction services.

After returning from their trip, John set up a joint venture with two of his friends and obtained a metal fabrication business in McConnellsburg, Pennsylvania. Starting with a small crew of twenty personnel, they fashioned and sold their first JLG aerial work platform in 1970. The company incorporates many of the simple design elements of that original lift into current models.

Since then, JLG Forklifts have come a long way from when Mr. John L. Grove came back from his fatefull cross-country trip and since the first JLG aerial platform entered the marketplace. As of today, the business has expanded itself into quite a few international markets and continues to cultivate innovative machines to ensure that customers are able to become safer and more well-organized within their workplace.
